SUMMARY

Aspiring Data Scientist with a Bachelor of Computer Applications background and practical project experience in machine learning, deep learning, natural

language processing, and data analytics. Proficient in Python, SQL, data preprocessing, exploratory data analysis, feature engineering, model

development, and evaluation. Developed end-to-end projects including gold price prediction using regression models, LSTM-based spam detection, and

an AI-powered resume analyser. Interested in applying data-driven methods to solve real-world problems and building reliable predictive solutions.

EDUCATION

Bachelor of Computer Applications (BCA)

Government Arts and Science College, Perumbakkam, Chennai — University of Madras

2023–2026 | First Class :73.8 %

TECHNICAL SKILLS

Programming & Querying: Python, SQL

Analysis: Pandas, NumPy, Data Cleaning, Exploratory Data Analysis (EDA), Feature Engineering

ML: Scikit-Learn, Regression, Classification

Data Visualization & BI: Power BI, DAX, Power Query, Advanced Excel, KPI Dashboards

Tools & Deployment: VS Code, Streamlit

PROJECTS

Gold Price Prediction

Python | ML | Pandas | NumPy | Streamlit

- Collected 1 year gold data, performed EDA & feature engineering using USD-INR, crude oil & silver price
- Built Random Forest Regression model achieving 92% accuracy with low RMSE
- Deployed real-time prediction web app using Streamlit

Spam Message Detection

Python | Deep Learning |Pandas | LSTM | Text Classifications | Tokenisation

- Built text classification model on 1000 SMS/Emails using tokenization & padding techniques

- Implemented LSTM neural network to understand sequential text patterns
- Achieved spam/ham classification with end-to-end preprocessing to evaluation workflow

AI Resume Analyser

Python | NLP | Gemini API | LLM | Streamlit

- Built AI-powered tool using Gemini API & LLM to analyse resume vs job description
- Implemented NLP for keyword extraction & skill-matching to identify gaps
- Generated ATS compatibility score & actionable feedback for optimization
- Designed Streamlit UI with prompt engineering for instant AI-based analysis

Canteen Sales Analytics | Data Analysis & Power BI

Power BI | Power Query | DAX | Data Modelling | Data Visualisation

- Analysed a sales dataset containing more than 10,000 records to identify sales patterns and high-performing product categories.
- Performed data cleaning and EDA using Power Query to handle 10K+ rows and ensured data accuracy for reporting.
- Built KPI views for total sales, top products, and category-wise performance to support business decision-making.
- Created an interactive Power BI dashboard with slicers and filters to support sales monitoring and reduce repetitive manual reporting.

Hospital Dashboard | Power BI & Data Modelling

Power BI | Power Query | DAX | Data Modelling | Data Visualization

- Cleaned and transformed 250+ hospital records using Power Query and prepared the data for reporting, ensuring 95% data quality.
- Developed KPI views for total patients, average cost, and insurance usage, including a reported insurance usage rate of 43%.
- Created visuals such as donut charts and tree maps, added interactive filters, and built dynamic dashboard for hospital performance monitoring.
- Enabled data-driven decision-making for hospital management through automated and interactive reporting.
